

# BUS ANALYZER CAN FD/HS, LS, LIN MUXFLOW

**MuxFlow** is the new free software tool offered by Exxotest<sup>®</sup> for the analysis and diagnostics of embedded communication networks.

Combined with the Exxotest<sup>®</sup> VCI-Muxdiag3 communication interface, it provides trainers, engineers, and technicians with a simple yet powerful solution for working with the latest-generation communication protocols.

## Main Features

- Compatibility with CAN FD, CAN HS, CAN LS and LIN networks
- Real-time frame transmission and reception, filtering features
- Communication recording for offline analysis : ASC and MF4 format
- Support for the DoCAN protocol
- DBC and LDF databases support for simplified signal decoding
- Intuitive interface, multi-windows, designed for both educational and diagnostic/validation efficiency

## MuxFlow Advantages

- An accessible and educational solution for training and engineering
- Compatibility with modern network environments (CAN FD, DoCAN)
- Developed and maintained by Exxotest<sup>®</sup>, a leading player in automotive diagnostics
