## 1. INSTRUCTION MANUAL

**The model should only be opened by certified and authorised persons**

### ***Installing and starting up benchtop learning module DT-E001***

Connect the module to the 12 V – 25 A power supply unit provided. Then wire up the components to operate the system as indicated in the user manual.

### ***Environment***

Learning module DT-E001 is designed for benchtop use. It must be installed in a dry place away from dust, steam and combustion fumes.

The module requires approximately 400–500 lux of light

The module must be operated in a practical exercise room. Its operating noise level does not exceed 70 decibels.

Module DT-E001 is protected against potential user error.

### ***Calibrating and maintaining module DT-E001***

Calibration: factory setting.

Maintenance frequency: none.

Cleaning: use a soft, clean cloth.

### ***Number of units and position of user***

Module DT-E001 is a single work station.

The module user will remain seated throughout operation.

### ***Putting out of operation***

Switch off the power supply by setting the switch to 0.

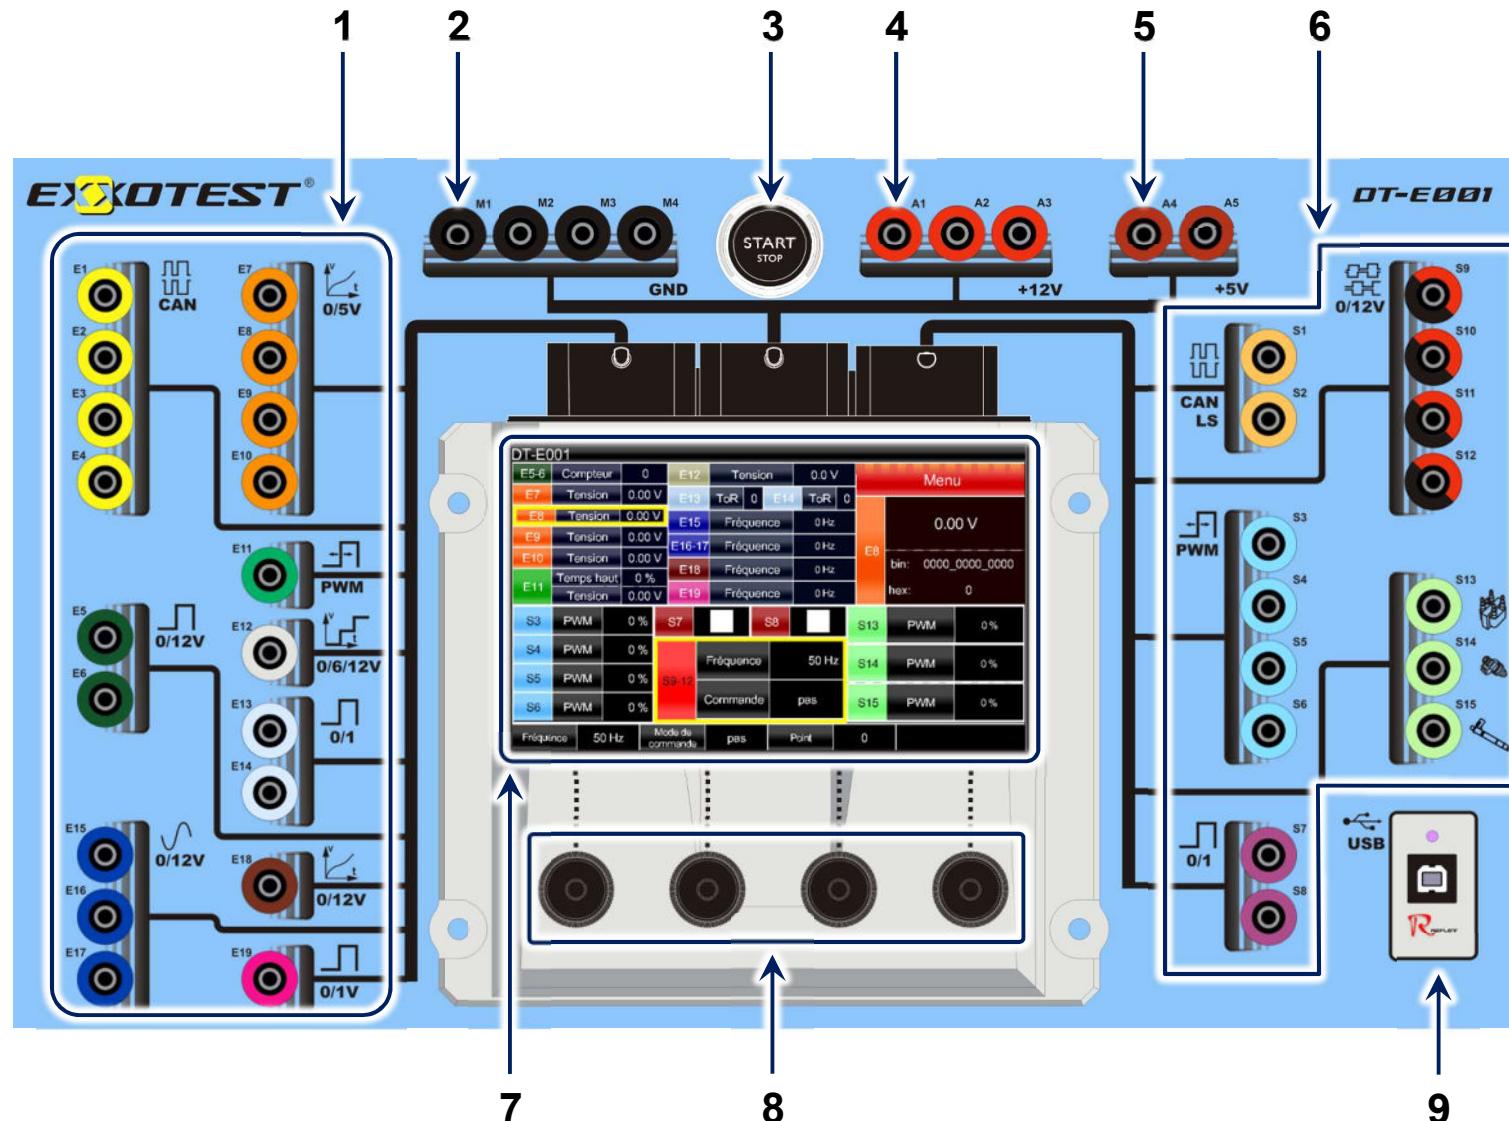

Unplug from the 230 V supply.

Store module DT-E001 in a secure room while out of use.

### ***Transporting module DT-E001***

Module DT-E001 must be switched off and disconnected before transport.

## 2. PRESENTATION OF THE MODULE

**Module components**

No.	Description
1	Communication bus and/or sensor signal input sockets
2	Ground sockets available for measurement or to power other modules
3	Start/Stop button: enables or disables the outputs (6)
4	12 V supply sockets available for the other modules
5	5 V supply sockets available for the other modules
6	Output sockets to control actuators and transmit LS CAN frames
7	Touch screen
8	Pushbuttons/knobs relating to the functions described at the bottom of the screen
9	USB port for communication with the REFLET program and to update the module

**LIST OF MODULE DT-E001 OUTPUTS**

Socket No.	Signal	Module
S1	LS CAN: CAN H signal	DT-E002, 'Dashboard'
S2	LS CAN: CAN L signal	
S3	EGR valve control, 0-12 V PWM	DT-C003, 'Engine control by PWM system'
S4	Air Control Valve control, 0-12 V PWM	
S5	Electronic Throttle control, 0-12 V PWM	DT-C006, 'Electric fan unit'
S6	Electric fan chopper control, 0-12 V PWM	
S7	Electric fan low speed control (grounding)	DT-C005, 'Stepper motors'
S8	Electric fan high speed control (grounding)	
S9	Stepper motor control, 0-12 V	DT-C002, 'Injection and ignition systems'
S10	Stepper motor control, 0-12 V	
S11	Stepper motor control, 0-12 V	
S12	Stepper motor control, 0-12 V	DT-C002, 'Injection and ignition systems'
S13	Ignition coil control	
S14	Petrol injector control	
S15	Diesel injector control	

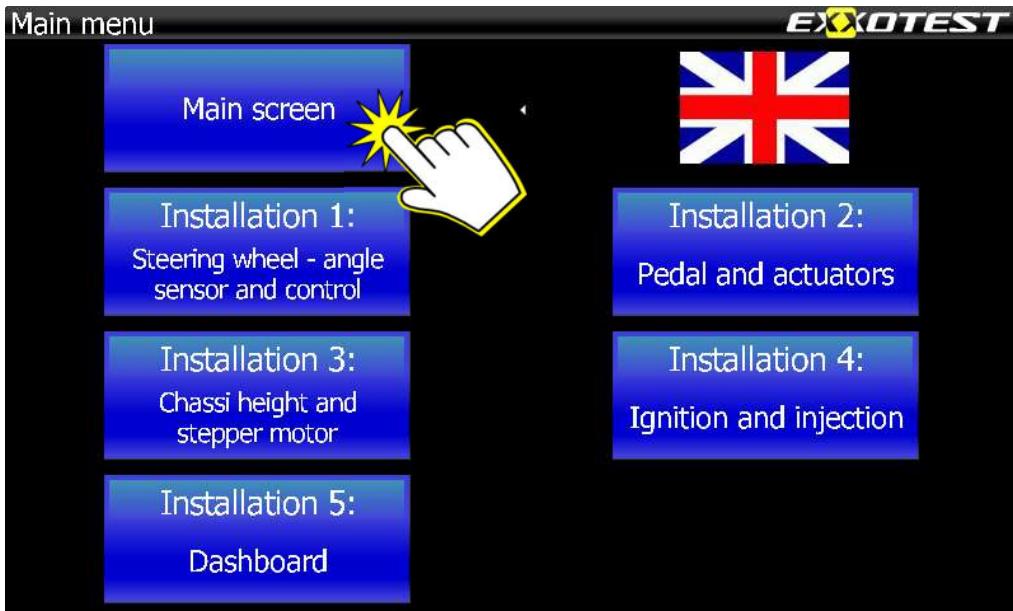

## LIST OF MODULE DT-E001 INPUTS

Socket No.	Signal	Module
E1	HS CAN: CAN H signal	
E2	HS CAN: CAN L signal	
E3	LS CAN: CAN H signal	DT-M001, 'Steering angle sensor + lighting/turn-signal control'
E4	LS CAN: CAN L signal	
E5	Square-wave analog signal (S1): 0-12 V	
E6	Square-wave analog signal (S2): 0-12 V	
E7	Analog signal, 0-5 V variable voltage	DT-M002, 'Pedal position and ride height sensor'
E8	Analog signal, 0-5 V variable voltage	DT-M004, 'Air temperature and pressure sensors'
E9	Analog signal, 0-5 V variable voltage	
E10	Analog signal, 0-5 V variable voltage	DT-C003, 'Engine control by PWM system'
E11	Pulse Width Modulation, 0-12 V	DT-M002, 'Digital ride height sensors'
E12	'Diag info' signal, 0, 6 or 12 V	DT-C006, 'Electric fan unit management'
E13	Binary input, 0-12V	
E14	Binary input, 0-12V	DT-M002, 'Brake pedal sensor'
E15	Square-wave analog signal: 0-12V	
E16	Inductive sine-wave signal, channel 1	DT-M006, 'Speed and position sensors'
E17	Inductive sine-wave signal, channel 2	
E18	Variable-frequency square-wave signal: 0-12 V	DT-M004, 'Air flow sensor'
E19	Variable-frequency square-wave signal: 0-1.6 V	DT-M003, 'ABS wheel sensor'

### 3. TOUCH SCREEN: SELECTION AND NAVIGATION

#### 3.1. Basic operation

Once module DT-E001 has been powered up from the 12 V–25 A supply provided and a short startup sequence has run, the following screen appears.

This is the main menu. As ***the screen is touch-sensitive***, simply touch the field you wish to select.

- ✓ Select the flag to change language. Press again to continue scrolling through the available languages.
- ✓ Select “Main screen” and “Setup 1”, “Setup 2” “Setup 3”, etc. to choose the operating mode of module **DT-E001** (the modes are described in the following pages).

➤ *The main menu will change as new upgrades are introduced (additional languages, new setups, etc.). Free updates can be easily downloaded from our online server via the USB port.*

To return to the main menu from the various “setups”, press the red block in the top left corner of the screen in every mode.

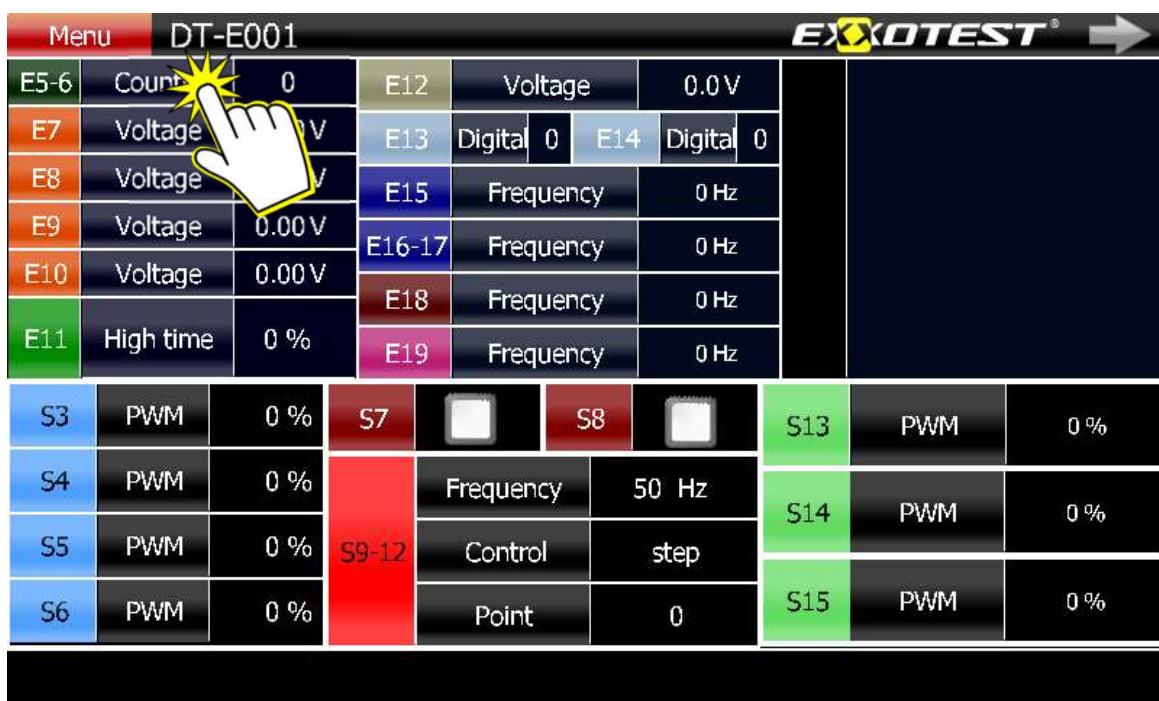

### 3.2. Activating the control outputs

➤ **Beware:** The actuators are disabled if the arrow is not green!

## 4. MAIN SCREEN

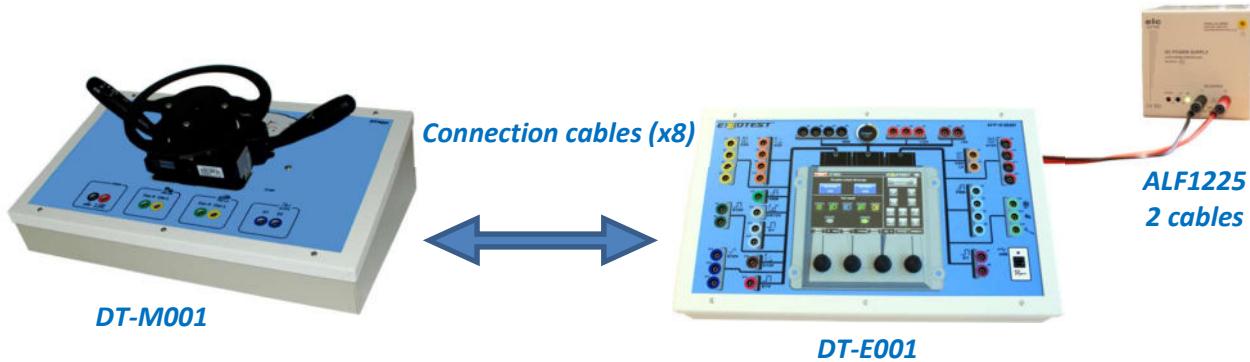

All input and output sockets of module **DT-E001** are accessed via this screen.

### 4.1. Digital conversions

DT-E001 input sockets	Input signal	Encoding	Resolution
<b>E5, E6</b>	<i>Step counter</i>	<i>12-bit</i>	<i>1 bit corresponds to 1 step</i>
<b>E7, E8, E9, E10</b>	<i>Voltage: 0–5 V</i>	<i>10-bit</i>	$2^{10}=1024; 5 / 1024 = 0.0049 \text{ V}$ <i>Thus 4.9 mV for 1 bit</i>
<b>E11</b>	<i>0–100%</i>	<i>8-bit</i>	<i>1 bit corresponds to 1%</i>
<b>E12</b>	<i>Voltage from 0 to 15V</i>	<i>10-bit</i>	$2^{10}=1024; 15 / 1024 = 0.01465 \text{ V}$ <i>Thus 14.65 mV for 1 bit</i>
<b>E16, E17, E18, E19</b>	<i>Frequency: 0–4095 Hz</i>	<i>12-bit</i>	<i>1 bit corresponds to 1 Hz</i>

## 5. STEERING ANGLE SENSOR AND CONTROLS: SETUP 1

### 5.1. Necessary hardware and wiring

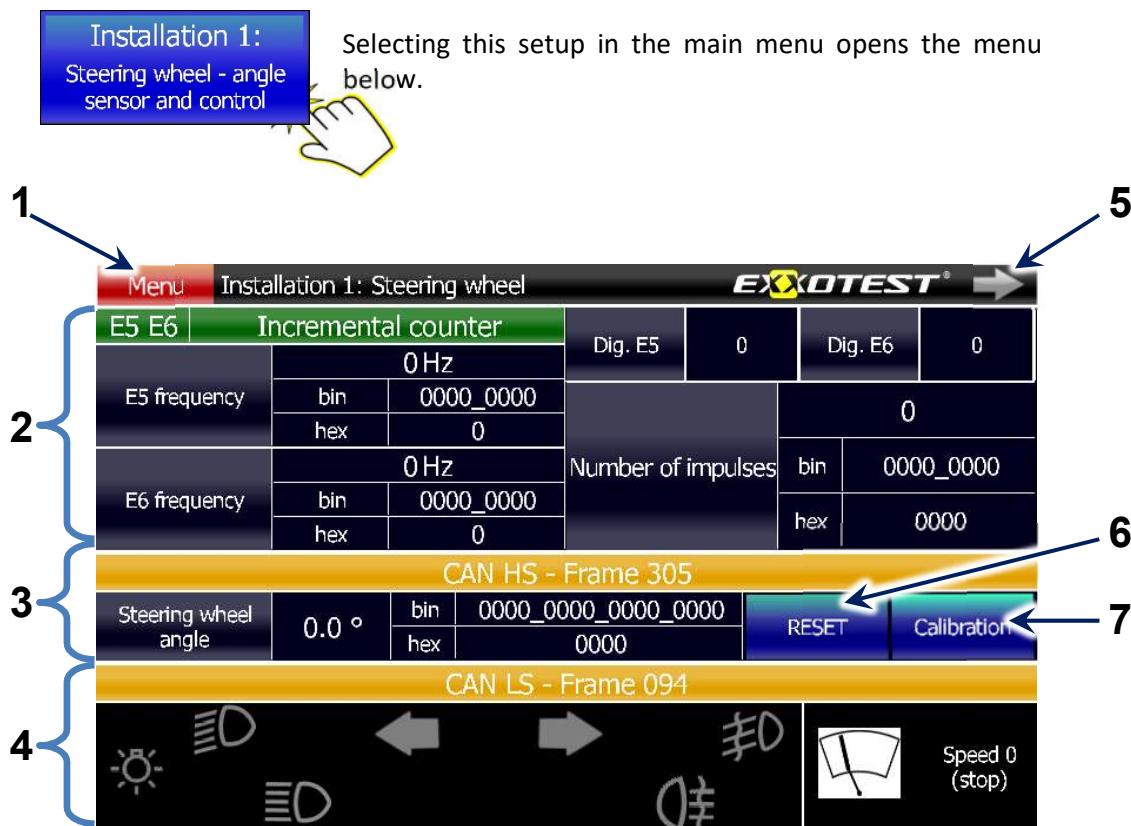

#### Connections

Allocation	<i>DT-M001 terminal</i>	<i>DT-E001 terminal</i>
<i>High Speed CAN</i>	<i>H</i>	<i>E1</i>
	<i>L</i>	<i>E2</i>
<i>Low Speed CAN</i>	<i>H</i>	<i>E3</i>
	<i>L</i>	<i>E4</i>
<i>Steering angle sensor: analog signals</i>	<i>S1</i>	<i>E5</i>
	<i>S2</i>	<i>E6</i>
<i>Grounds and power supplies*</i>	<i>+12V</i>	<i>A1</i>
	<i>GND</i>	<i>M1</i>

\* with ALF1225 connected to the rear of DT-E001

## 5.2. Description of the screen

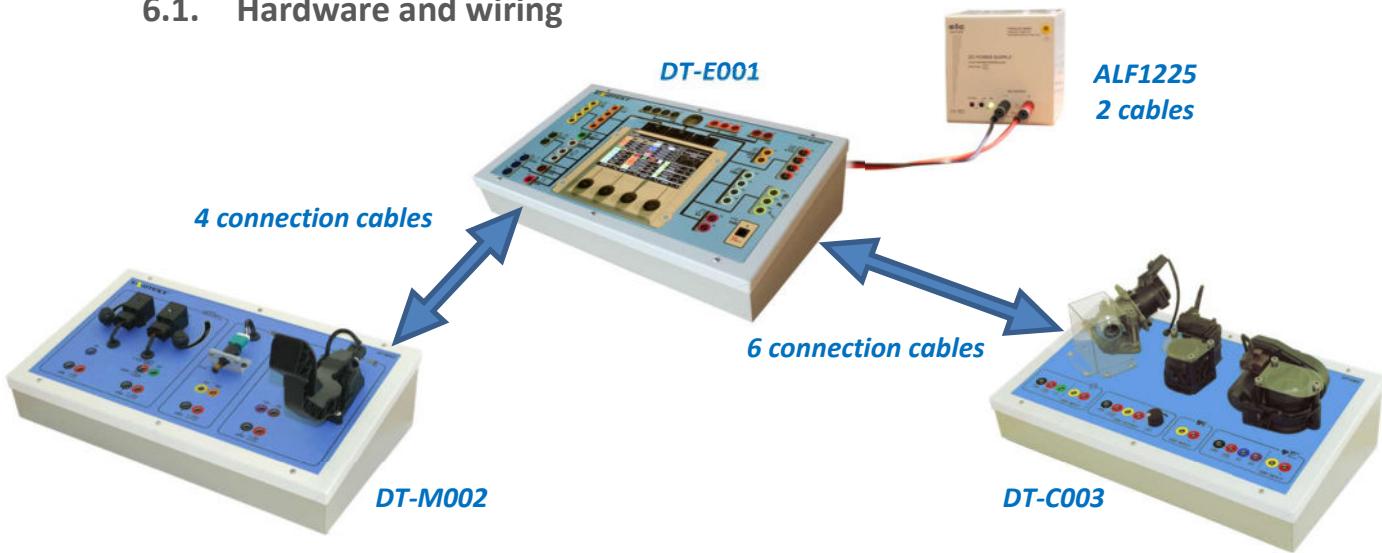

No.	Description
1	Return to the main menu
2	Analog sensor information: frequency + digital conversion
3	Steering angle in degrees, and binary and hexadecimal code (Inter System CAN)
4	Lighting/turn-signal indicator and wiper speed displays (Comfort CAN)
5	Press the Start/Stop button to enable (or disable) controls (indicator)
6	Reset (then calibrate)
7	Steering mid-point calibration (reset first)

- Refer to the DT-M001 instructions: details of sensor operation, practical exercises, etc.

## 6. ACCELERATOR PEDAL, ETC/EGR/ACV: SETUP 2

### 6.1. Hardware and wiring

#### Connections

	<i>Allocation</i>	<i>DT-M002 terminal</i>	<i>DT-E001 terminal</i>	<i>DT-C003 terminal</i>
<i>Accelerator pedal</i>	<i>Sensor signal</i>	<i>S5</i>	<i>E7</i>	
		<i>S6</i>	<i>E8</i>	
	<i>Grounds and power supplies*</i>	<i>+5V</i>	<i>A4</i>	
		<i>GND</i>	<i>M1</i>	
<i>Electronic Throttle Control</i>	<i>Position copy signal</i>		<i>E9</i>	<i>S2</i>
			<i>E10</i>	<i>S3</i>
	<i>Engine control</i>		<i>S5</i>	<i>GBF INPUT +</i>
			<i>S6</i>	<i>GBF INPUT -</i>
	<i>Grounds and power supplies*</i>		<i>A5</i>	<i>+5V</i>
<i>EGR valve</i>			<i>M2</i>	<i>GND</i>
	<i>Engine control</i>		<i>A1</i>	<i>GBF INPUT +</i>
			<i>S3</i>	<i>GBF INPUT -</i>
	<i>Position copy signal</i>		<i>E9</i>	<i>S1</i>
	<i>Grounds and power supplies*</i>		<i>A4</i>	<i>+5V</i>
<i>Air Control Valve</i>			<i>M3</i>	<i>GND</i>
	<i>Engine control</i>		<i>A2</i>	<i>GBF INPUT +</i>
			<i>S4</i>	<i>GBF INPUT -</i>

\* with ALF1225 connected to the rear of DT-E001

## 6.2. Description of the “Electronic Throttle Control” screen (default selection)

Selecting this setup in the main menu opens the menu below.

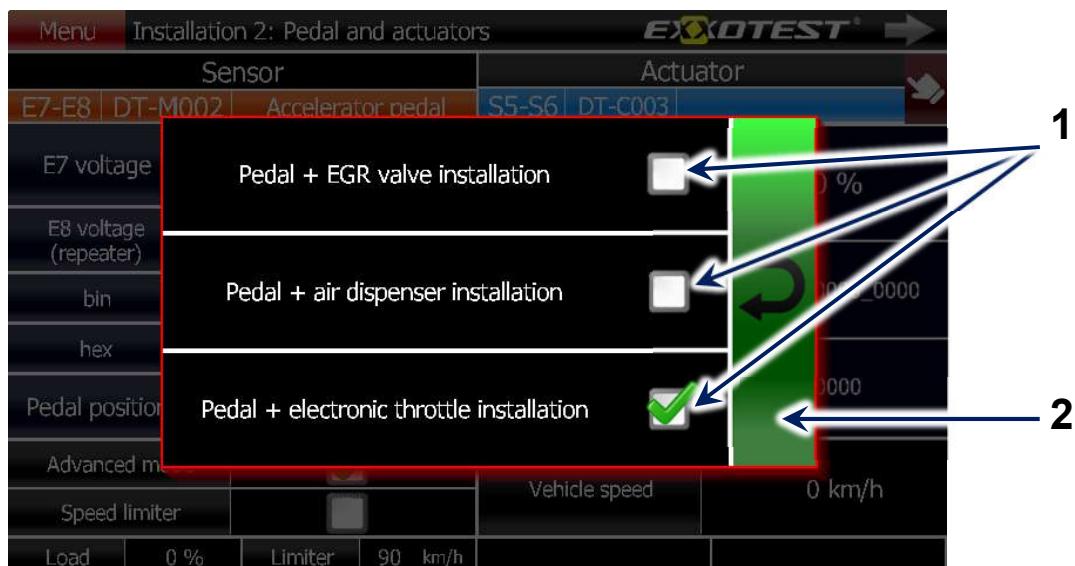

No.	Description
1	Return to the main menu
2	Analog sensor information: voltage, percentage, digital conversion
3	Advanced mode: speed limiter
4	Go to “Setup selection” menu (see next page)
5	Electronic Throttle Control setpoint as percentage + digital conversion
A	Load percentage setting
B	Speed limit setting
C and D	Not used

### 6.3. Selecting the setup

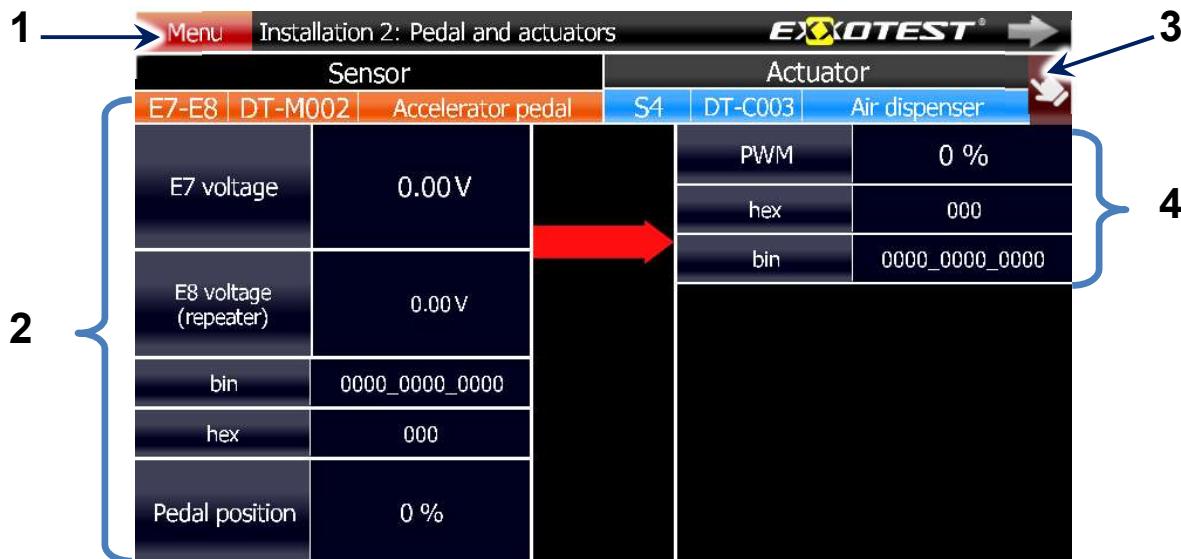

Selecting this icon on the “Setup 2” screen displays the following menu.

No.	Description
1	Check boxes to select active setup
2	Return to selected setup screen

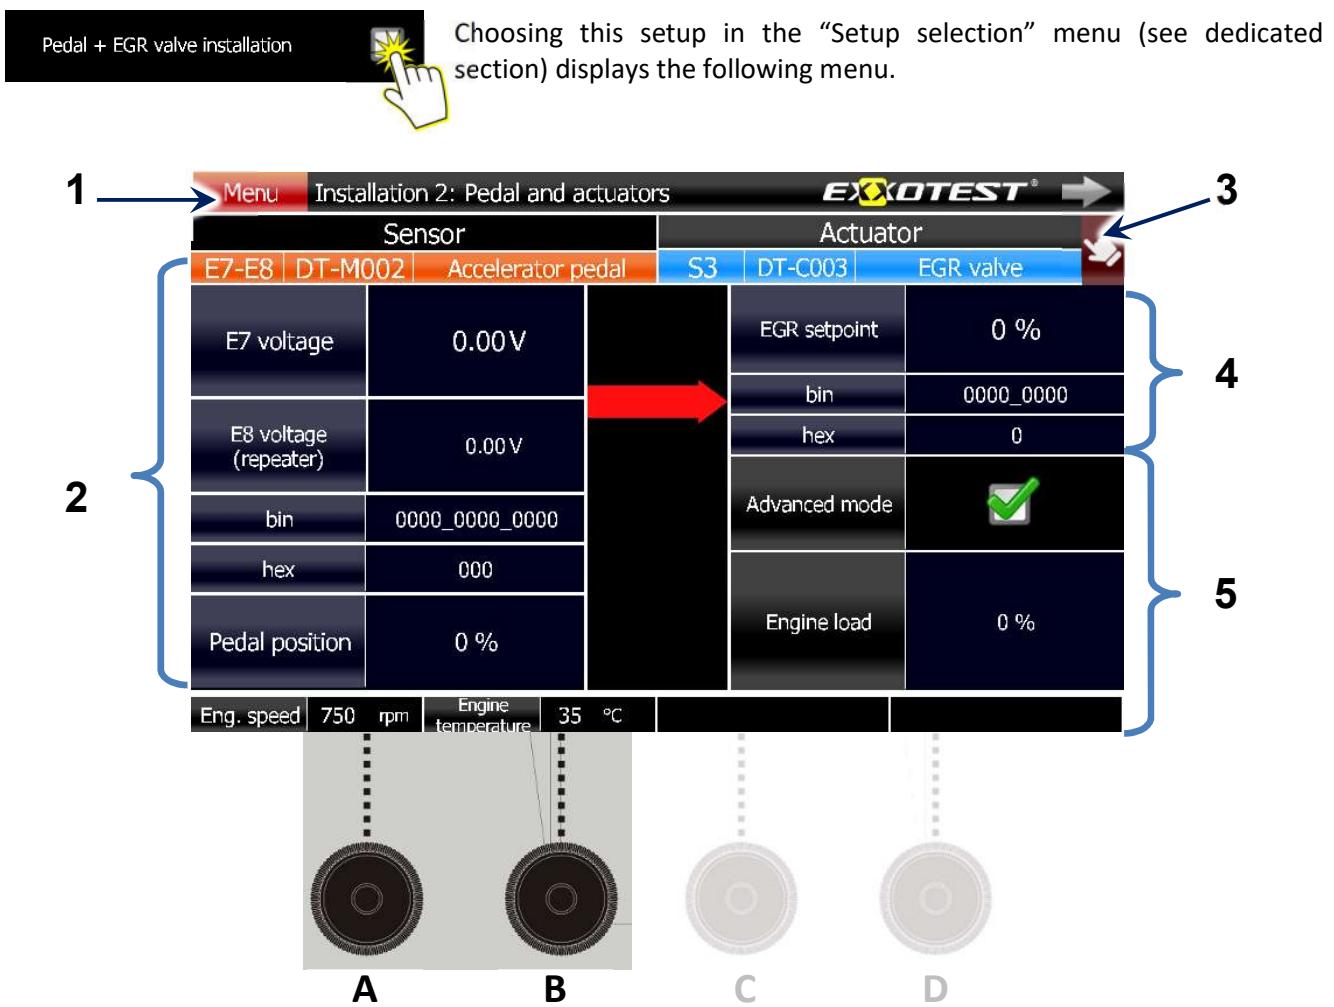

## 6.4. Description of the “Air Control Valve” screen

Pedal + air dispenser installation  Choosing this setup in the “Setup selection” menu (see above) displays the following menu.

No.	Description
1	Return to the main menu
2	Analog sensor information: voltage, percentage, digital conversion
3	Go to “Setup selection” menu (see dedicated section)
4	Air Control Valve setpoint as percentage + digital conversion

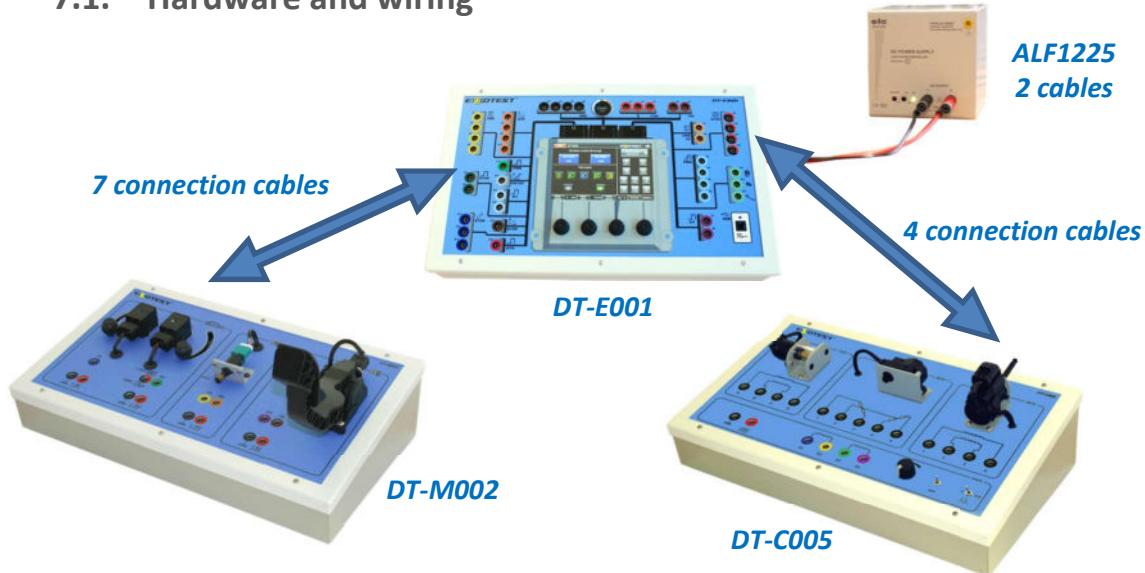

## 6.5. Description of the “EGR Valve” screen

No.	Description
1	Return to the main menu
2	Analog sensor information: voltage, percentage, digital conversion
3	Go to “Setup selection” menu (see dedicated section)
4	EGR valve setpoint as percentage + digital conversion
5	Advanced mode: engine load (%)
A	Engine speed setting in rpm
B	Engine temperature setting in °C
C and D	Not used

## 7. RIDE HEIGHT SENSORS AND STEPPER MOTOR: SETUP 3

### 7.1. Hardware and wiring

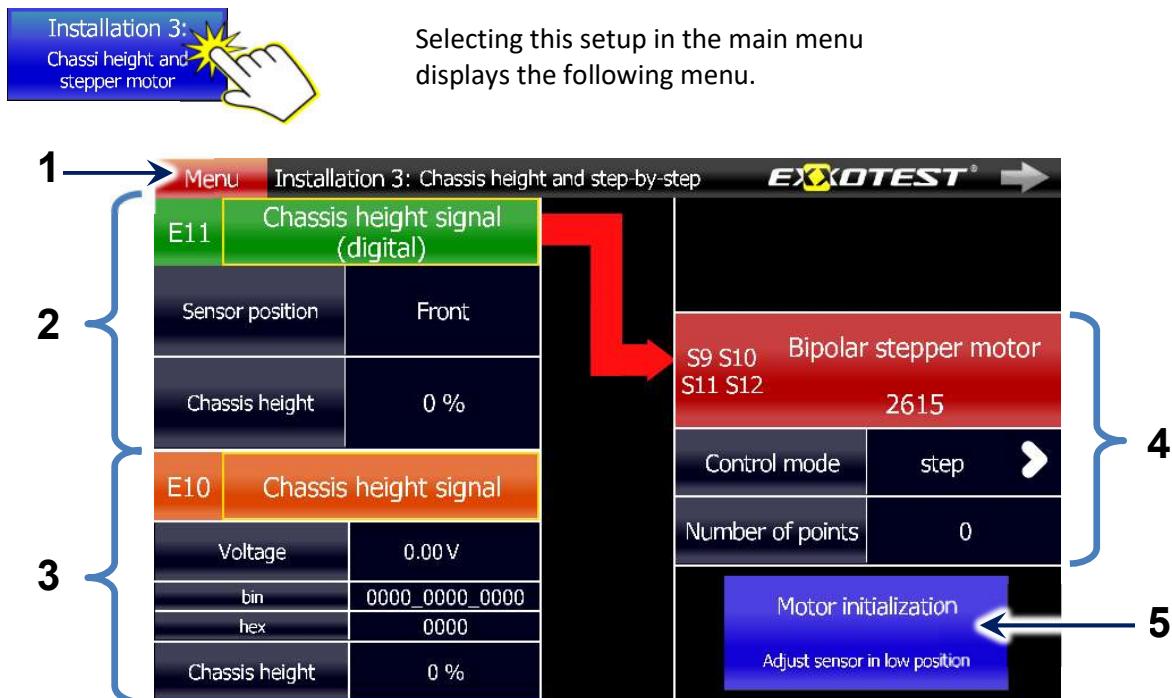

#### Connections

	<i>Allocation</i>	<i>DT-M002 terminal</i>	<i>DT-E001 terminal</i>	<i>DT-C005 terminal</i>
<i>Ride height sensors</i>	<i>Analog sensor signal</i>	<b>S1</b>	<b>E10</b>	
	<i>Digital sensor signal</i>	<b>S2</b>	<b>E11</b>	
	<i>Digital sensor position (Front or Rear)**</i>	<b>GND or +12V</b>	<b>M3 or A2</b>	
	<i>Grounds and power supplies*</i>	<b>+12V</b>	<b>A1</b>	
		<b>+5V</b>	<b>A4</b>	
		<b>GND (x2)</b>	<b>M1, M2</b>	
<i>Headlamp height setting motor</i>	<i>Unipolar stepper motor control</i>		<b>S9</b>	<b>1</b>
			<b>S10</b>	<b>4</b>
			<b>S11</b>	<b>2</b>
			<b>S12</b>	<b>3</b>

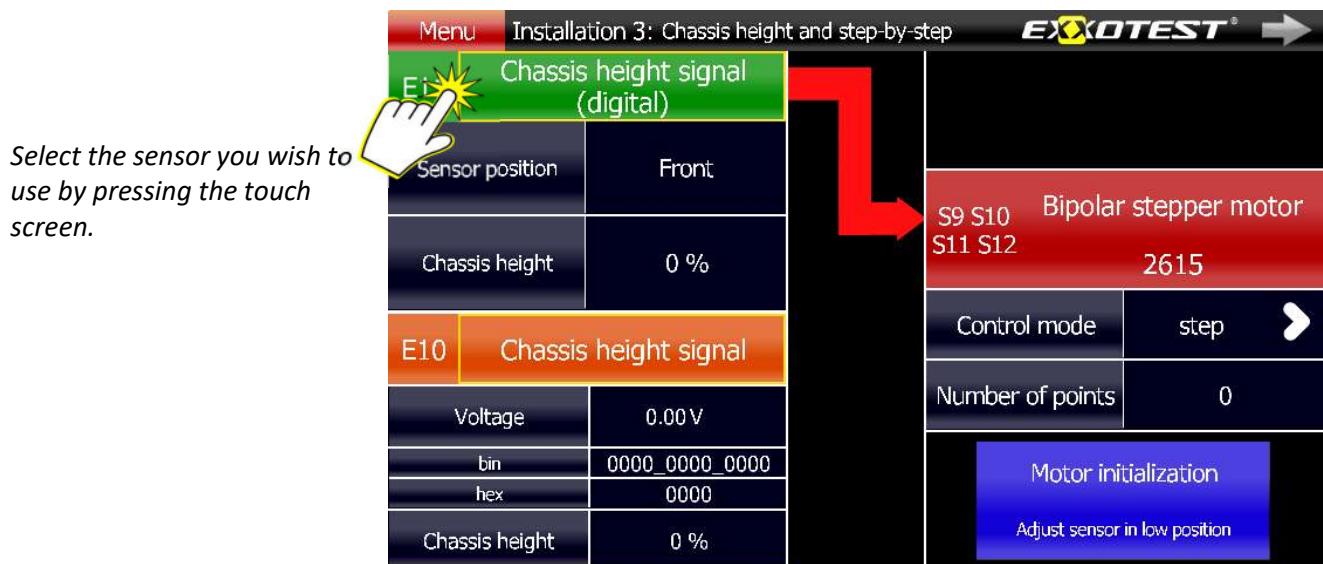

\* with ALF1225 connected to the rear of DT-E001

\*\* to change position, change the dedicated terminal connection and then cut the power supply to the sensor and restore (resetting the sensor).

## 7.2. Description of the “Ride height and stepper motor” screen

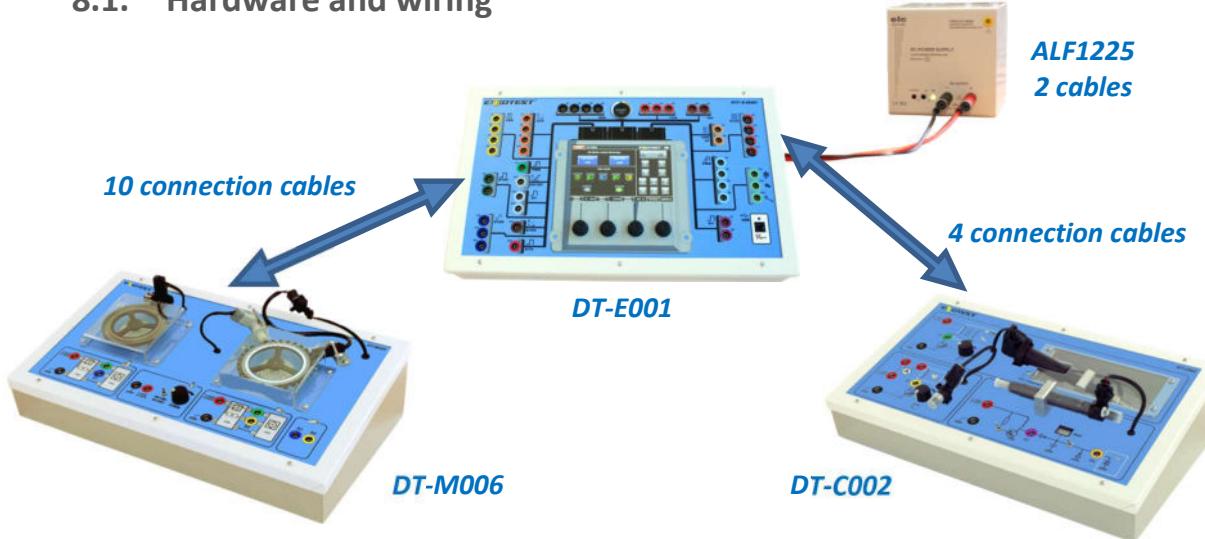

No.	Description
1	Return to the main menu
2	Digital sensor information: ride height position and percentage
3	Analog sensor information: voltage, digital conversion, ride height percentage
4	Bipolar stepper motor control
5	Low-position sensor initialising

## 8. IGNITION AND INJECTION: SETUP 4

### 8.1. Hardware and wiring

#### Connections

	<i>Allocation</i>	<i>DT-M006 terminal</i>	<i>DT-E001 terminal</i>
<b>Magneto-resistive sensor</b>	<i>Sensor signal</i>	<b>S1</b>	<b>E15 **</b>
	<i>Ground and power supplies*</i>	<b>+12V</b>	<b>A1</b>
<b>Hall Effect sensor</b>	<i>Sensor signal</i>	<b>GND</b>	<b>M1</b>
	<i>Grounds and power supplies*</i>	<b>S2</b>	<b>E15 **</b>
<b>Inductive sensor</b>	<i>Sensor signal</i>	<b>+12V</b>	<b>A2</b>
	<i>Grounds and power supplies*</i>	<b>GND</b>	<b>M2</b>
<b>Target management</b>	<i>Sensor signal</i>	<b>S3</b>	<b>E16</b>
	<i>Grounds and power supplies*</i>	<b>S4</b>	<b>E17</b>
<b>Target management</b>	<i>Grounds and power supplies*</i>	<b>+12V</b>	<b>A3</b>
	<i>Grounds and power supplies*</i>	<b>GND</b>	<b>M3</b>

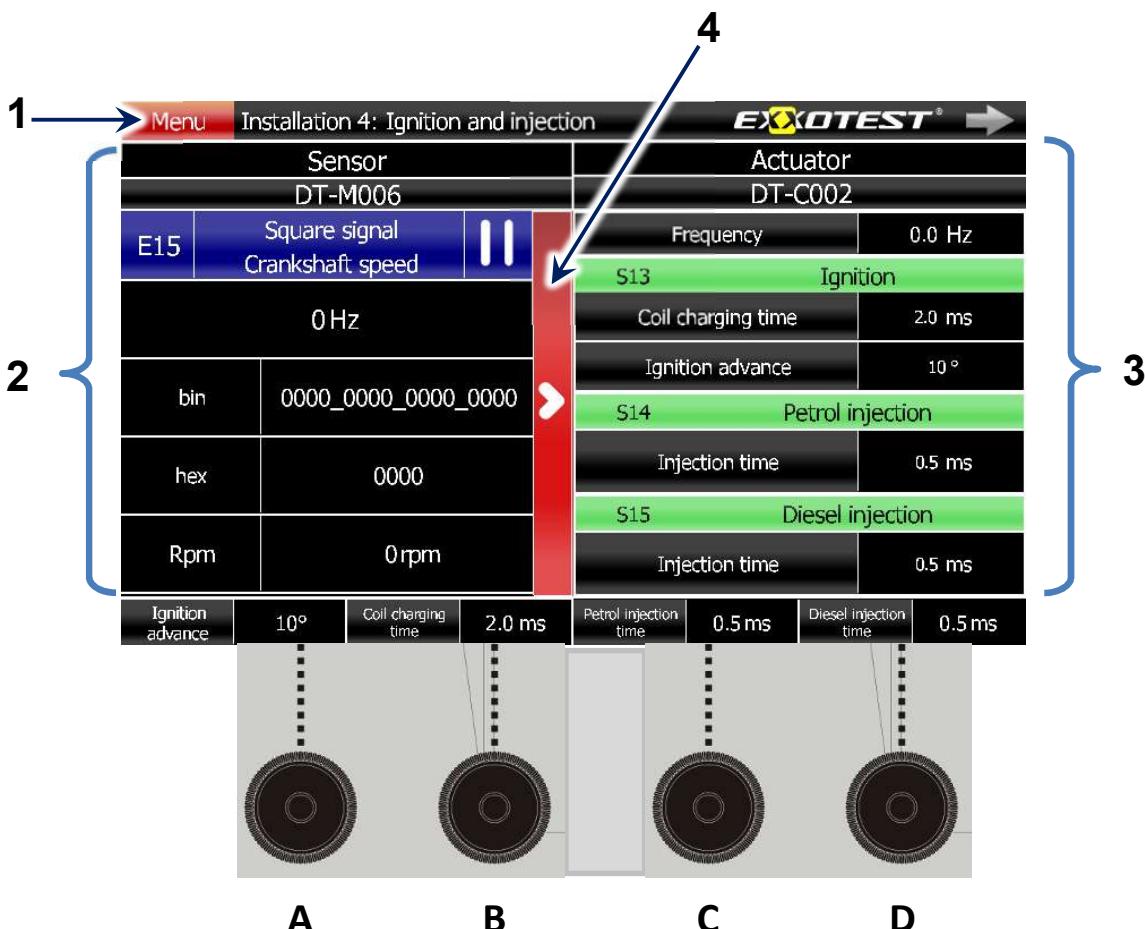

\* with ALF1225 connected to the rear of DT-E001

\*\* only connect one sensor at a time to E15

## 8.2. Description of the “Ignition and injection” alarms

Selecting this setup in the main menu displays the following menu.

No.	Description
1	Return to the main menu
2	Sensor information (magnetoresistive or Hall effect): Frequency, digital conversion, speed
3	Actuator information (ignition coil, petrol injector or diesel injector): Frequency, time, degrees
4	Press the red area to switch to the third sensor (see next page)
A	Spark advance setting (in degrees)
B	Coil charge time setting (in milliseconds)
C	Petrol injector injection time setting (in milliseconds)
D	Diesel injector injection time setting (in milliseconds)

- ✓ Select the central part of the screen (red area) to switch from input E15 (magnetoresistive or Hall effect sensor) to inductive sensor inputs E16 and E17.

Menu	Installation 4: Ignition and injection			EXKOTEST®
	Sensor		Actuator	
	DT-M006		DT-C002	
E16	Sinusoidal signal		Frequency	0.0 Hz
E17	Crankshaft speed		S13	Ignition
0 Hz			Coil charging time	2.0 ms
bin	0000_0000_0000_0000		Ignition advance	10 °
hex	0000		S14	Petrol injection
Rpm	0 rpm		Injection time	0.5 ms
Ignition advance	10°	Coil charging time	2.0 ms	S15 Diesel injection
				Injection time 0.5 ms
				Petrol injection time 0.5 ms Diesel injection time 0.5 ms

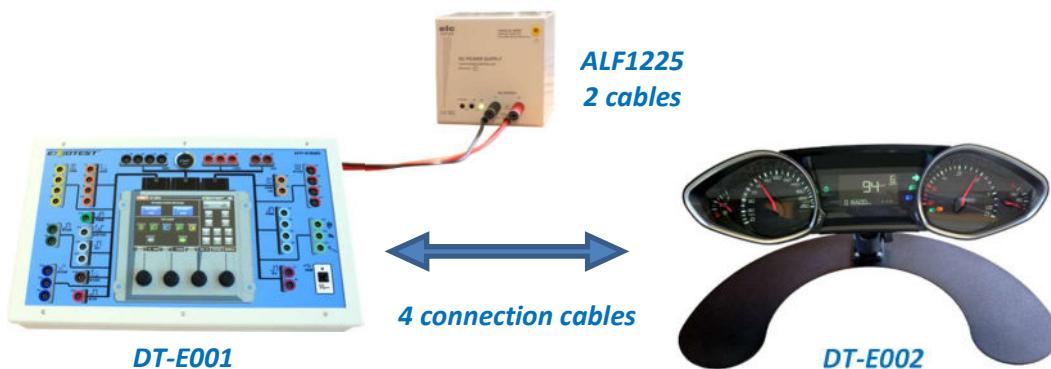

- ✓ You can freeze the sensor information by pressing pause, then restart the measurement by pressing the arrow again.

Menu	Installation 4: Ignition and injection			EXKOTEST®
	Sensor		Actuator	
	DT-M006		DT-C002	
E15	Square signal		Frequency	0.0 Hz
	Crankshaft speed		S13	Ignition
0 Hz			Coil charging time	2.0 ms
bin	0000_0000_0000_0000		Ignition advance	10 °
hex	0000		S14	Petrol injection
Rpm	0 rpm		Injection time	0.5 ms
Ignition advance	10°	Coil charging time	2.0 ms	S15 Diesel injection
				Injection time 0.5 ms
				Petrol injection time 0.5 ms Diesel injection time 0.5 ms

- Refer to the DT-M006 instructions: details of sensor operation, practical exercises, etc.

## 9. INSTRUMENT CLUSTER: SETUP 5

### 9.1. Hardware and wiring

#### Connections

	<i>Allocation</i>	<i>DT-E001 terminal</i>	<i>DT-E002 terminal</i>
<i>Instrument cluster</i>	<i>LS CAN H signal</i>	<i>S1</i>	<i>Green socket</i>
	<i>LS CAN L signal</i>	<i>S2</i>	<i>Yellow socket</i>
	<i>Ground and power supplies*</i>	<i>M1 GND</i>	<i>Black socket</i>
		<i>A1 +12V</i>	<i>Red socket</i>

\* with ALF1225 connected to the rear of DT-E001

## 9.2. Description of the “Instrument cluster” screen

Selecting this setup in the main menu displays the following menu.

No.	Description
<b>1</b>	Return to the main menu
<b>2</b>	Simulation of ignition, engine starting and lighting/turn-signal indicator lamps
<b>3</b>	Gearbox information and gear engaged
<b>A</b>	Vehicle speed variation (in km/h)
<b>B</b>	Engine speed variation (in rpm)
<b>C</b>	Fuel level variation (in %)
<b>D</b>	Distance travelled variation (in km)

# DECLARATION OF CONFORMITY

Manufacturer Name: ANNECY ELECTRONIQUE SAS  
Street: 1, rue Callisto - Parc Altaïs  
Town: 74650 CHAVANOD  
Country: France

Represented by the signatory below, declares that the following product:

Product reference	Product name	Make
DT-E001	Benchtop learning module: Information Processing – Analog/Digital Conversion	EXXOTEST

complies with all requirements of European directives relating to the design of Electrical & Electronic Equipment (EEE) and the management of Waste Electrical & Electronic Equipment (WEEE) in the EU:

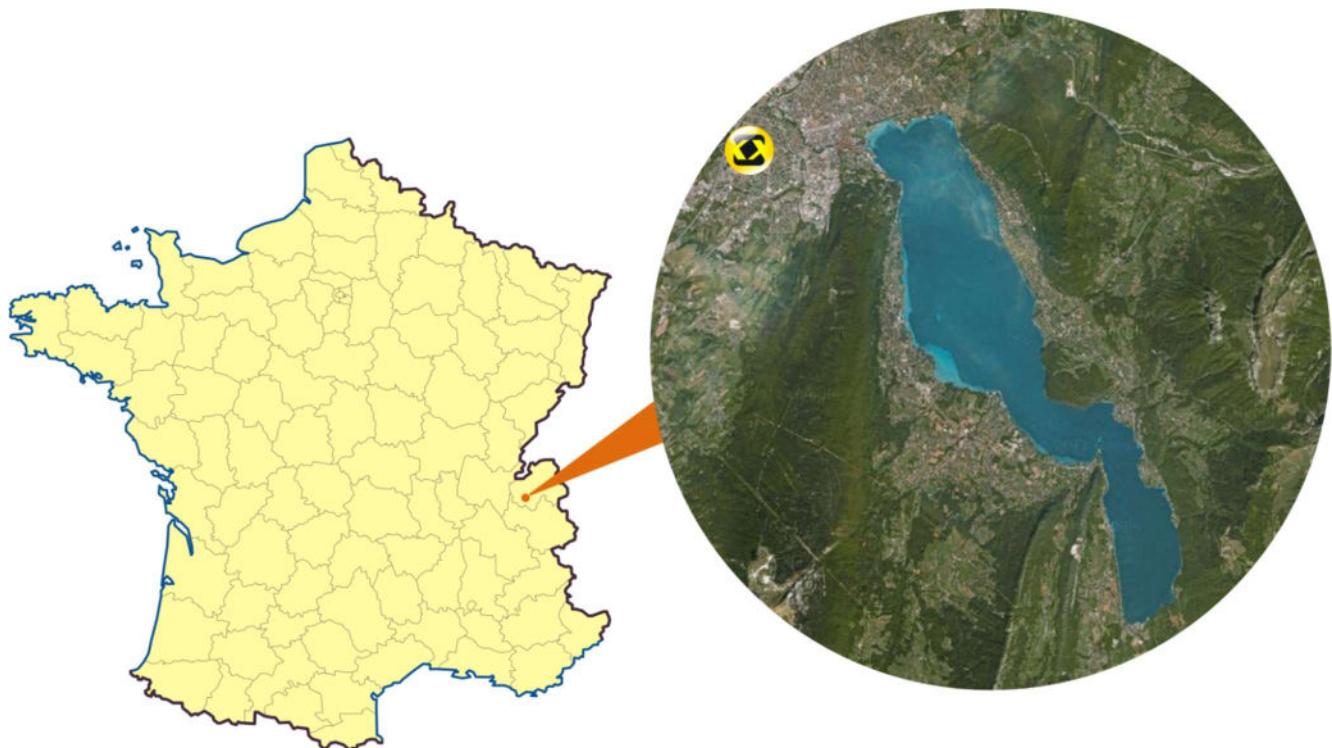

- Directive 2012/19/EU of the European Parliament and of the Council of 4 July 2012 on waste electrical and electronic equipment (WEEE)
- Directive 2011/65/EU of the European Parliament and of the Council of 8 June 2011 on the restriction of the use of certain hazardous substances in electrical and electronic equipment (ROHS)
- Electromagnetic Compatibility Directive 2004/108/EC of the European Parliament and of the Council of 15 December 2004.

The product has been manufactured in accordance with the requirements of European directive:

- Directive 2006/95/EC of the European Parliament and of the Council of 12 December 2006 on the harmonisation of the laws of Member States relating to electrical equipment designed for use within certain voltage limits.

Signed in Chavanod on 20 July 2015

Stéphane Sorlin, Chairman
