

**FUNCTIONS :**

- Carries out a quick and simple diagnosis of two 12V batteries in series
- Allows to watch both batteries performance when charging (engine running) or discharging (engine stopped, lights on)
- Enables simultaneous visualization of each battery voltage and total voltage (three distinct displays)

OPERATING INSTRUCTIONS :

The user connects the black clamp to the battery negative terminal (A), the yellow clamp on both batteries common link (B), and finally the red clamp to the battery positive terminal (C).

All tests are immediate and do not require any specific manipulation.

**CHARACTERISTICS :**

CB12/24	<ul style="list-style-type: none"> • Two LED ladders display voltage of batteries 1 and 2 (from <math><9,5V</math> to <math>>15,2V</math>) • A LED ladder displays the total voltage (from <math><19V</math> to <math>>30,4V</math>)
Applications	All makes
Power supply	Vehicle battery
Presentation	Casing with anti-shock buffer (200 x 95 x 47 mm), supplied in its storage case with user's manual.
